## Landscape<sup>20</sup>

Ideal for bunker construction and the reconstruction of golf green surrounds

Landscape20 is a BS3882:2015-compliant general purpose, high quality, topsoil with a sand content of typically 60-65%. The clay and silt content helps to retain moisture and nutrients, especially **Phosphorus, Potassium and Magnesium**, which are essential for healthy germination and growth. The texture of this sandy loam soil makes it easy to handle and consolidate into the shape required. In non-irrigated areas its moisture retention properties help keep vegetation green and healthy during period of drought.

### Case Study

#### Bury St Edmunds Golf Club

Re-shaping and re-contouring of the Club's green complex, achieved with 120 tonnes of Landscape20 topsoil used at a depth of 150-200mm over the course's natural sandy loam soil. Course consultant Peter Jones said: ***"The properties of Landscape20 allow you to create the shapes needed around bunkers and greens, and the naturally occurring nutrients within it result in great turf growth."***
