

LawnDressing is a blend of 90% medium and coarse sand with 10% British Sugar BS3882:2015 compliant TOPSOIL. LawnDressing's combination of specialist sand and soil is ideal for grass establishment and maintenance.

The sand is predominantly medium to coarse and sub angular in shape, which assists free drainage and promotes good integration into the surface of the lawn. The soil within the blend contains both phosphorous and potassium, which contributes to soil fertility and encourages healthy growth.

LawnDressing

A high quality, sand based, multi-purpose dressing, designed for use on lawns.

Senior Horticulturalist at King's College, Cambridge — Steve Coghill — has been carrying out his own trials with LawnDressing on the formal lawns that grace the College grounds. Areas that had suffered from compaction and poor drainage received 40 tonnes of LawnDressing in the autumn of 2016 and Steve is delighted with the results.

Features	Benefits
90% total sand	<ul style="list-style-type: none"> • Free draining • Easy to apply
Sub Angular Sand	<ul style="list-style-type: none"> • Open free draining • Less likely to cap
BS3882:2015 Compliant Topsoil	<ul style="list-style-type: none"> • Promotes and sustains growth • Nutrient retentive • Assists seed establishment • Greens up turf
Typically contains 50% Coarse and Medium Sand	<ul style="list-style-type: none"> • Free draining, encourages healthy root growth
Saturated Hydraulic Conductivity Average 10mm / hr	<ul style="list-style-type: none"> • Water freely moves through the surface
STRI Analysed	<ul style="list-style-type: none"> • Peace of mind
