

SubSoil is found immediately below the Topsoil. It is typically less fertile and lighter in colour than Topsoil. We offer two different types of SubSoil to suit all of your project requirements.

General Purpose Subsoil is a fully analysed and compliant to BS8601:2013 subsoil with typically 86% total sand. It is ideal for use with Landscape20 or Hort Loam in general landscaping schemes such as turfing and planting.

Free Draining Subsoil is a fully analysed subsoil. With a sand content of 95% typically, it is designed for use on projects where a free draining subsoil is needed such as lawns, sports pitches and tree pits.

SubSoil

- ✓ Turfing
- ✓ Planting
- ✓ Pitches and Lawns
- ✓ Tree Pits

.High total sand content for excellent drainage
.Perfect for use beneath Landscape20 and Hortloam

Features	Benefits
Available All-Year-Around	<ul style="list-style-type: none"> • No downtime during major projects
