

Sports&Turf

The perfect rootzone for fairways and tees, and ideal for tee construction

Sports&Turf rootzone is a 90/10 blend of medium to coarse sub-angular sand with British Sugar TOPSOIL's BS3882:2015-compliant soil. It's easy to work with and performs well in wet conditions. The soil content contains both phosphorous and potassium, which contribute to soil fertility and encourage healthy growth.

Case Study

Northwood Golf Club

Construction of three new tees utilising on site material for the subbase and Sports&Turf at a depth of 150mm to finish off the tees and provide an effective medium with excellent drainage for turf establishment. Course Manager Wesley Walker said: ***"I chose this material as we have had great success with it in the past. The sandy nature of this rootzone is not only great to work with but performs really well in wet conditions. The growth of turf on this rootzone is excellent."***
